

**Thesis:**

# **Ontological Requirements for Supporting Smart Navigation of Philosophical Resources**

PhD Candidate: Michele Pasin

Knowledge Media Institute  
Open University

First Supervisor: Enrico Motta  
Second Supervisor: Zdenek Zdrahal

Thesis submitted in partial fulfilment of the requirements for the degree of  
Doctor in Philosophy in Computer Science

Submitted 30th September 2008

## Abstract

This thesis describes a novel method for formalizing philosophical knowledge and shows how, by using it, it is possible to produce intelligent navigation mechanisms for supporting learning about philosophy.

The approach taken relies on the usage of Semantic Web technologies for the codification of the meaning of data and the retrieval of relevant resources. As such, it represents a groundbreaking attempt to adopt these disciplines in a less *traditional* domain; a domain that, because of its inherent abstractness, poses peculiar problems both at the epistemological and the knowledge representation levels.

What are the major types of entities playing a role in philosophical discourse, and how shall we proceed in order to have a computer manipulate efficiently a set of representations *about* them? These are the kind of questions lying at the heart of our research. Moreover, we attempt to test this formal framework by putting it into practice with a real-world application, PhiloSurfical.

PhiloSurfical is a prototype tool created with the purpose of helping students learn about a classic in twentieth century philosophy, Wittgenstein's 'Tractatus Logico-Philosophicus', by means of dynamic and contextual navigation mechanisms. In particular, the dissertation discusses how such mechanisms could be developed so to mimic some of the classic *ways* the philosophical

discipline employs to *narrate* itself. For this reason, we generally refer to them as *narrative pathways* (e.g., *historical narrative*, *theoretical narrative*, etc.).

Evaluation of both the ontology and the prototype tool have shown positive results. Also, it has revealed interesting and complementary research direction which we present in the final sections of this work.

## Acknowledgements

A number of people have given me strength and inspiration during these years. Among them, there are a few who did an especially good job in making my PhD days lighter, and my thinking sharper.

So I would like to express some special gratitude to these people who had a special influence in my life. They are, in order of appearance:

*my parents*, a continuous source of hope and support;

*andrea*, friend and philosophical guide in the abyss of knowledge;

*enrico* and *zdenek*, who showed me the way so many times during the PhD work;

*marian* and *trevor*, for the many lessons that taught me what it is to do 'R'esearch;

*imma*, who had the patience to be with me when my work was taking me away from her.

To all the others I have not mentioned - do not worry, I'll be with you as soon as I finish the PhD :-)
